

Segmentation Orchestration Built for AI-Era Attack Vectors

The *only* solution that combines complete asset visibility, vulnerability prioritization, and segmentation orchestration.

Turn Risk-Aware Insights Into Dynamic Policies

VISIBILITY & INVENTORY

Asimily uses AI and deep packet inspection to build a comprehensive device inventory, combined with its data and research: which devices communicate with what, and how (e.g., PLCs SCADA Controller, port 44818).

VULNERABILITY PRIORITIZATION

Asimily pinpoints exploitable vulnerabilities with full device and manufacturer data (MDS2s, SBOMs), then auto-prioritizes based on real-time risk which is directly used for segmentation policies.

POLICY AUTO-RECOMMENDATION

Asimily automatically recommends precise, conflict-free policies that will have the biggest impact to their risk posture.

POLICY SIMULATION

Asimily allows users to see the impact of policy implementation in their environment prior to active deployment.

POLICY CREATION

Asimily creates policies from risk-aware insights in the format/language native to the NAC or Firewall.

POLICY APPLICATION

Asimily leverages APIs and capabilities built with the NAC or Firewall vendor to apply the policies directly on the NAC or Firewall.

CONTINUOUS SEGMENTATION

Asimily proactively adapts segmentation policies to network changes, new devices and configuration changes to minimize risk.

INTELLIGENT POLICY ENGINE

Asimily continuously evaluates policies for errors, inconsistencies and inefficiencies to ensure they meet their original intent, and switch memory is efficiently utilized.

FEATURES		Host Segmentation Solutions	Network Segmentation Solution
Inventory & Discovery of All Connected Devices	●	○	○
Device Traffic / Neighbor Mapping	●	○	○
Vulnerability Detection & Prioritization	●	○	○
Attack Vector Analysis	●	○	○
Policy Auto-Recommendation	●	●	●
Policy Creation	●	●	●
Policy Simulation	●	●	●
